

LUDECKE

Since 1930. The perfect connection.

Program Extension: New Versions of Manifolds for Temperature Regulation Lines

We largely extended our portfolio of manifolds and now offer a comprehensive series made of aluminium and stainless steel. Additional threaded connectors were added to the blue and red anodised manifolds made of aluminium. They are now available with an internal thread G 3/8". Moreover, we extended our manifolds made of stainless steel with numerous new variants. Thus, for this product as well there is now a full product range at **LUDECKE** as there is for manifolds made of aluminium.

The **LUDECKE** manifolds allow for a clean layout of the temperature regulation lines and in this way increase work and production safety. Especially for the plastic processing industry this offers huge advantages. The manifolds can be installed directly at the machine and thus guarantee an organized layout of inflow and return flow of the medium close to the mould. This saves both energy as well as hoses lines and ensures quick and safe working.

The manifolds are of very high-quality, sturdy, reliable and suitable above all for the coupling series with nominal size DN 6 and DN 9.

Since more than 90 years, **LUDECKE** is the leading partner for coupling systems to connect flexible fluid lines with tools, machines and industrial equipment. Since 1949, we have been manufacturing fittings at the headquarters in Amberg for a variety of applications and media, which are distributed worldwide by the technical trade or used by the leading machine manufacturers (OEM) in their own machinery.

We are developing and producing first-class, innovative and sustainable products according to the highest quality standards. The product portfolio is comprised of a comprehensive standard range as well as individual custom item projects. Thanks to our broad product range, our many years of know-how and our versatile range of services, we always guarantee safe and efficient solutions for your daily work.
